

R8

# Clever design, boundless creativity

The R8 series combines unique design with high-spec finish and excellent performance. Thanks to the various lengths, lumen packages and installation options, the R8 provides you with the freedom to illuminate your spaces in a creative way.

With a diameter of a mere 80 mm the R8 boasts a slim, elegant design.

Thanks to a connector, you can link the R8 luminaires together into a light line.

## Adds value to any space

The refined design adds architectural value to the R8 series in the most diverse environments: entrance halls, conference rooms or showrooms, businesses, schools, stores and hospitals. Thanks to the different lumen packages – from 1450 to 5400 lumen – the luminaires can be used for both accent and general lighting.

## Unique design with high-spec finish

With a diameter of a mere 80 mm the R8 boasts an elegant design. The HaloOptics® diffuser in satin-anodised polycarbonate ensures uniform lighting, without dark areas. The luminaire itself is a fully sealed unit. The sleek end caps perfectly suit the optics and the narrow aluminium housing seamlessly aligns with the contour of the optics. Driver and cables have become nearly invisible.

## Boundless creativity

The R8 provides you with the freedom to design the lighting in your spaces playfully and creatively. The luminaires are available in several lengths (787, 1162 and 1542 mm) and can be installed in numerous ways – surface-mounted or suspended, linked or individual, horizontal or vertical. So give free reign to your creative imagination!

Thanks to a specially developed connector, the R8 luminaires can be linked together into a continuous light line. Upon request, the R8 series can also be delivered as an uninterrupted light line up to 3 m long. As standard, suspended luminaires can be up to 2m long. Longer suspension lengths are available upon request.

### A sustainable choice

The low power consumption and long service life of LEDs also make the R8 a sustainable choice. The luminaires' high output – up to 131 lumen per Watt – cuts down on your energy consumption. And after 50,000 burning hours you can still count on 98% of the initial luminous intensity. Depending on the length or the lumen package chosen, versions with UGR <22 or UGR <25 are available.

### Integrated emergency lighting

R8 luminaires can be fitted with an emergency unit. In this way you combine lighting and emergency lighting in one and the same luminaire. Luminaires with integrated emergency lighting feature a larger technical compartment.

## Range

R8 luminaires are available in 3 lengths and 6 lumen packages, in surface-mounted and suspended versions.

## R8

- Unique design, exceptional performance
- Mood lighting and general lighting
- For representational spaces
- Whimsical and creative
- Emergency lighting as special
- Low energy consumption, long service life
